COLD COFFEE CREAMS

Cold coffee creams for the Ho.Re.Ca market

Many slush creams for all tastes!

The line of powdered preparations for cold coffee creams is more and more complete and varied to meet any need of renowned customers. The flagship product of our company is available in many formats with different characteristics: from the CLASSICA coffee cream to be prepared with milk or cream and adding some espresso to make it even more personalized, to the "READY" coffee creams, an appropriate definition of the cream that does not require anything more than adding milk. Finally the top of the range with REGINA coffee creams to be prepared only with the addition of water, since they already contain milk powder and excellent blends of pure freeze-dried coffee of first quality. Cold creams are prepared for use in classic slush machines, their preparation is very simple and of course involves the use of milk (unlike the queen line, which involves the use of water).

The creams have been enhanced in recent years to increase the use of classic slush machines to prepare slushes or sorbets. In fact, with the same machine you can offer customers a fresh and creamy product, comparable to an ice cream, to be consumed at any time of the day.

Our company has decided to offer creams both in slush format and in single-dose format.

They are available in multiple flavors and like all our products they can be customized as you like, inventing a thousand and one different recipes every day.

The creams are prepared with long-life milk.

We remind you that for all products prepared with milk, the slush machine must always be left on at least in storage mode (mini-drink), to avoid its acidification. In a product prepared with milk it has a storage time in the slush machine less than a product prepared only with water.

This is due to the natural deterioration of the milk which, even if preserved for a long time, once opened, should be consumed within a maximum of 3-4 days.

The creams can be served by decorating them with

toppings, grains, cocoa, biscuits or more according to taste and to your liking.

Description: The Classic Coffee cream has been designed to customize it by adding your best espresso (about 15/20 cups of coffee) to the preparation method.

This allows to obtain a cream with a more intense flavor and to differentiate its taste.

To obtain a much creamier product it is advisable to replace the 2 Lt of whole milk with 1 Lt of milk + 1 Lt of unsweetened cooking cream.

We remind you that for all products prepared with milk, the slush machine must always be left on at least in storage mode (mini-drink), to avoid its acidification.

In a product prepared with milk it has a storage time in the slush machine less than a product prepared only with water.

This is due to the natural deterioration of the milk which, even if preserved for a long time, once opened, should be consumed within a maximum of 3-4 days.

The product is well known and appreciated on the foreign market in
how close it is to the "milky" taste of Italian cappuccino.

In product prepared with milk it has a storage time in the slush machine
lower than a product prepared only with water.

This is due to the natural deterioration of the milk which, although long-lasting,
once opened it should be consumed within a maximum of 3-4 days.

COFFEE SINGLE DOSE COFFEE CREAM (HOT)

The single-serve Hot Coffee Cream has a soft and velvety structure and the modality of preparation is very simple: using a blender just blend 1 sachet of made with 80 ml of previously heated whole milk until the desired density is obtained.

Dilution 1 single-dose + 80 ml of milk

Yield 1 cup

Shelf Life 36 Months

Non-hydrogenated fats

Gluten Gluten free

Milk And Dairy Products

Contains Milk Or Dairy Products

Vegan No

Dyes Without Dyes

To obtain a more intense flavor it is advisable to blend 1 sachet single-dose with 60ml of hot milk and 1 cup of espresso coffee.

This product can be customized by adding about 5g of "L'inventafacile" Hazelnut or almond creams to obtain a particular taste.

For a more intense taste: 1 single dose + 60 ml of milk + 1 cup of coffee

The single-dose creams have been designed for all those who want to prepare a great product, but they don't have a slush machine available.

The advantages of using single-dose products are different.

Different flavors can be prepared quickly without the use of expensive machinery and sometimes even bulky. There are no problems with the storage of the milk-based product, as the cream is prepared and served on the spot.

The investment on the product is very limited.
